

Recipient SURNAME
My **STREET**,
MY Town,
SW1A 1AA

This address has a mix of fonts and sizes. This creates an address where the first three lines each contain multiple y1 co-ordinates (the bottom co-ordinate) so that we can test our address extraction.

The address that the code extracts will be different depending on whether the words are grouped by y co-ordinate or line.

Grouping by y co-ordinate will result in more than 4 address lines, since there are more than 4 y co-ordinates in the address.
